To Erteco warehouse partners – to whom it may concern

Erteco delivers high quality raw materials of plastic and rubber from leading manufacturers. We take responsibility for our products and ensure that they meet the requirements and expectations of our customers. Our materials are delivered in sealed bags, octabins or containers by well-known forwarders. Despite preventive measures it happens that containers break and raw material is spilled when handled.

We know that our materials may have an environmental impact if they are not disposed and recycled in the correct way along the value chain. Therefore, it is of outmost importance that all waste material is taken care of and recycled correctly. As our warehouse partner you are expected to follow applicable local legislation and take relevant actions to prevent waste material from entering sewer systems, contaminating subsoil water.

Compliance with this policy may be reviewed unannounced.

Carl-Otto Ohlsson
Managing Director
